

FACTSHEET

Waste Wise Cities Tool in Victoria, Seychelles

In the rapidly urbanizing world, the crisis in waste management and plastic pollution is a reflection of current unsustainable lifestyles.

The availability of fact-based data on municipal solid waste can guide evidence-based planning and lead to increasingly effective and efficient solid waste collection systems, enhanced local resource recovery and controlled waste disposal, thereby improving the quality of life for urban residents.

UN-Habitat's Waste Wise Cities Tool (WaCT) assesses the parameters for Sustainable Development Goal indicator 11.6.1 - the proportion of municipal solid waste collected and managed in controlled facilities out of total municipal solid waste generated, by the city. It consists of seven steps and provides the necessary data to support evidence-based decision making by city managers.

Together we can achieve a sustainable future.

Have a look at the Waste Wise Cities website, learn about the WaCT and how its application created impact on the ground in other cities.

City: **Victoria**
Country: **Seychelles**

Population: **85,276 (2019)**

Year of WaCT Survey: **2019**

Key Waste Data

Total municipal solid waste (MSW) generated by the city

199 t/d

Total MSW collected

195 t/d

98%

Total MSW collected and managed in controlled facilities

195 t/d

98%

Per capita MSW generation

2.34 kg/cp/d

Per capita household food waste generation

0.50 kg/cap/d

City Recovery Rate

2%

Household and non-household waste generation

	Average household waste generation (kg/capita/day)	Total population	Total MSW generated by households (t/day)
High income	1.54	28,425	44
Middle income	1.54	28,425	44
Low income	1.54	28,426	44
TOTAL	1.54	85,276	132

Total MSW generated from non-household sources (t/day): **68**
 calculated using proxy of 30 % of total MSW

Composition of waste at the households and at the disposal site

Household waste composition
higher income areas

Household waste composition
middle income areas

Household waste composition
lower income areas

Average household waste
composition

Waste composition at disposal site

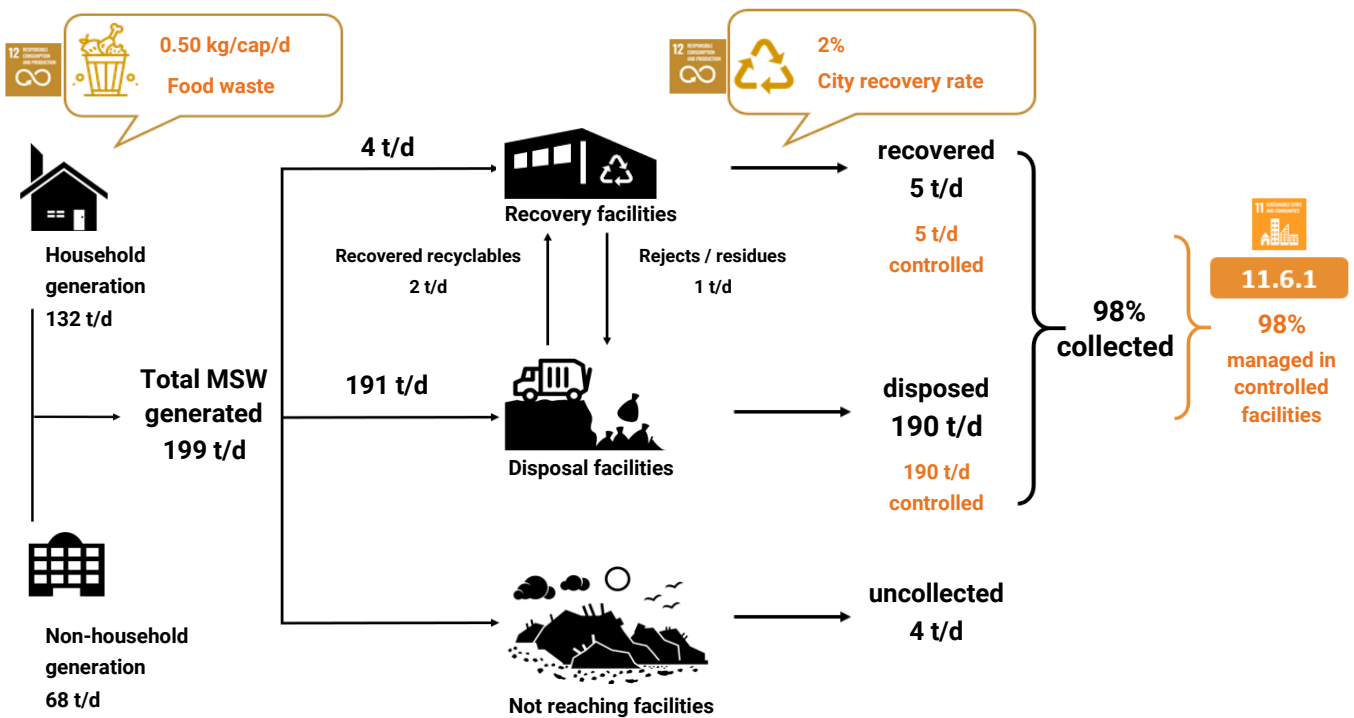

- Kitchen / canteen
- Garden / park
- Paper / cardboard
- Plastic film
- Plastics dense
- Metals
- Glass
- Textiles / shoes
- Wood (processed)
- Special wastes
- Composite products
- Other

Potential recyclables from households

Types	Recyclable waste generation from households (t/day)
Food waste	43
Plastic film	9
Plastic dense	7
Paper and cardboard	7
Glass	6
Metal	11
Total	95
